

ATTENTION!

FloodCam *Important Information*

1

The label on your new FloodCam motion activated camera and dual floodlight incorrectly states that it is for indoor use only. The FloodCam is weather resistant and can be used outdoors safely and reliably.

2

If you follow the instructions included with your FloodCam, it might initially seem that you are unable to turn off the floodlights. This will only happen if you set your FloodCam to be active only when it is dark. To avoid this, set the FLOODLIGHT CONTROL dial to the **DARK** setting before connecting the FloodCam to power.
